SUMMARY

AI and LLM Engineer focused on building agentic workflows, RAG pipelines, backend APIs, and reliable AI-powered applications. Experienced with prompt engineering, embeddings, FAISS, structured outputs, evaluation, fine-tuning, and production-style ML deployment using Python, FastAPI, Docker, and Kubernetes.

EDUCATION

University of Southern California

Master of Science, Applied Data Science

Relevant Coursework: Machine Learning, Information Retrieval, Data Mining, Data Management, Python Programming, Statistics

Los Angeles, CA

August 2024 - May 2026

Pandit Deendayal Petroleum University

Bachelor of Technology, Computer Science

Relevant Coursework: Artificial Intelligence, Pattern Recognition, Data Structures and Algorithms, Operating Systems

Gandhinagar, Gujarat

August 2019 - May 2023

EXPERIENCE

Eurus Lifecare

Software Engineer, Data Systems (Contract)

Ahmedabad, India

January 2024 - June 2024

- Developed FastAPI and PostgreSQL services powering inventory and operational workflows, creating structured data foundations for automation and analytics across 500+ records
- Proposed and implemented intelligent alerting and monitoring pipelines that reduced manual tracking effort and improved operational visibility through automated status analysis
- Coordinated with business stakeholders to identify repetitive decision workflows and convert them into scalable API-backed systems supporting future AI-driven automation

Data Security Council of India

Data Science Intern

Noida, India

January 2023 - July 2023

- Engineered Python NLP pipelines on 100K+ cybersecurity records, extracting signals from messy text data for threat intelligence workflows
- Standardized reusable preprocessing and validation components across 3+ analysis tasks, improving consistency for downstream insight generation
- Shared technical findings with analysts and domain stakeholders, translating model outputs into clearer intelligence summaries

TalentServe

Software Engineering Intern

Mumbai, India

May 2022 - June 2022

- Worked with designers and engineers to deploy React, REST API, and Python dashboard features across 3 departments, increasing engagement by 35%
- Identified API and UI improvements that reduced stakeholder feedback cycles by 25% during pilot testing

PROJECTS

Autonomous Decision Intelligence System (Bring-Your-Own Data)

- Designed agentic workflows that automate profiling, modeling, explainability, and decision reporting across 10+ tabular datasets
- Implemented Gemini agents with structured outputs, FAISS RAG memory, and validation layers across 100+ test queries to improve consistency

Agent OS - Multi-Agent Workflow Platform

- Led development of a production-style multi-agent AI platform using FastAPI, Next.js, PostgreSQL, and Gemini where supervisor, specialist, and critic agents coordinated tool execution, shared memory, and execution tracing across 50+ workflow evaluations
- Structured permission-aware orchestration, document ingestion, and runtime monitoring pipelines while improving workflow observability, debugging efficiency, and reliability for complex agent tasks

Fine-Tuned Text-to-SQL with Constrained Decoding

- Fine-tuned FLAN-T5 with LoRA adapters and Hugging Face PEFT on 2K+ WikiSQL samples, improving syntactic SQL validity from 0% to 90% while achieving 49% exact-match accuracy
- Designed schema-aware constrained decoding with token masking, temperature analysis, and component-level SQL validation to reduce invalid query generation during inference

LLM-Powered Course Recommender

- Built a semantic recommendation engine using SentenceTransformers embeddings and FAISS vector retrieval, achieving 90%+ relevance across 100+ evaluation queries

SKILLS

- Programming: Python, SQL, JavaScript, C++, Java
- AI Engineering: LLMs, Prompt Engineering, RAG, FAISS, Embeddings, Agentic Systems, Structured Outputs, LoRA
- ML & Data: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Hugging Face, PEFT, Model Evaluation
- Backend & Infra: FastAPI, REST APIs, Docker, Kubernetes, AWS, Git, Linux, PostgreSQL
- Statistics: A/B Testing, ANOVA, Hypothesis Testing, Data Mining, Similarity Search
