SUMMARY

Software Engineer with experience building scalable backend systems, enterprise applications, AI-powered software, REST APIs, and production-style deployment systems. Strong foundation in data structures, algorithms, databases, distributed systems, cloud-native development, and AI-assisted engineering with Python, Django, FastAPI, PostgreSQL, Docker, Kubernetes, React, and Git.

EDUCATION

University of Southern California Master of Science, Applied Data Science Relevant Coursework: Data Structures & Algorithms, Operating Systems, Data Management, Python Programming, Machine Learning	Los Angeles, CA August 2024 - May 2026
Pandit Deendayal Energy University Bachelor of Technology, Computer Science Relevant Coursework: Artificial Intelligence, Pattern Recognition, Cloud Computing, Operating Systems	Gandhinagar, Gujarat August 2019 - May 2023

EXPERIENCE

Leaniar LLC AI Engineer Intern • Architect and develop enterprise Document Suite features using Django, AngularJS, ElectronJS, and Python to streamline document-centric business workflows. • Design scalable REST APIs integrating SAP systems with enterprise applications, improving interoperability across internal business platforms. • Develop Claude- and GPT-powered automation for document processing, workflow orchestration, productivity, debugging, testing, and deployment. • Engineer modular desktop and web components emphasizing maintainability, extensibility, performance, and production readiness.	Remote, USA July 2026 - Present
Eurus Lifecare Software Engineer, Data Systems (Contract) • Architected FastAPI and PostgreSQL services for inventory and order workflows, enabling API-driven operations across 500+ product records. • Designed asynchronous processing pipelines and automated stock monitoring services, reducing manual overhead and improving responsiveness. • Built reusable backend modules with robust validation, debugging workflows, and maintainable REST-based service patterns.	Ahmedabad, India January 2024 - June 2024
Data Security Council of India Data Science Intern • Engineered Python data-processing and NLP pipelines analyzing 100K+ cybersecurity records for large-scale threat intelligence reporting. • Developed modular preprocessing, validation, reporting, and documentation workflows to improve reuse and analytical consistency. • Automated reporting workflows and documented technical methodologies to improve collaboration between engineers and cybersecurity analysts.	Noida, India January 2023 - July 2023

PROJECTS

Agent OS - Multi-Agent Workflow Platform • Architected a full-stack multi-agent workflow platform using FastAPI, Next.js, PostgreSQL, LangGraph, and Gemini for intelligent task orchestration through specialized AI agents. • Designed modular backend services for workflow execution, shared memory, permission-aware tools, artifact generation, document ingestion, and persistent execution history.	
CanaryML - Kubernetes ML Deployment Platform • Built Dockerized FastAPI inference services deployed on Kubernetes with canary deployment strategies, rollback mechanisms, traffic splitting, observability, and health monitoring. • Implemented production-style deployment workflows aligned with modern cloud-native engineering practices and release reliability.	
ChatDB - Natural Language Interface for Databases • Developed a Gemini-powered SQL interface with schema-aware query generation, validation, execution, and Streamlit visualization, improving query accuracy by 50% during testing. • Designed backend query-processing services supporting secure SQL generation, schema discovery, and execution across structured datasets.	
Autonomous Decision Intelligence System • Built a FastAPI, React, Next.js, PostgreSQL, and Scikit-learn analytics platform for data profiling, predictive modeling, explainability, report generation, APIs, and visualization workflows. • Implemented reusable APIs and visualization components enabling scalable end-to-end analytical workflows across multiple datasets.	

SKILLS

- **Programming:** Python, Java, C++, JavaScript, SQL
- **Backend & Systems:** Django, FastAPI, REST APIs, PostgreSQL, System Design, Distributed Systems, Data Structures & Algorithms, Linux, Git
- **Frontend:** AngularJS, React, Next.js, ElectronJS
- **Cloud & DevOps:** Docker, Kubernetes, AWS, Azure, Amazon Bedrock, Vertex AI, Redis, CI/CD
- **Machine Learning & AI:** LangGraph, LangChain, Scikit-learn, Pandas, NumPy, Spark, Hadoop, FAISS, RAG, LLM APIs
- **AI Productivity:** OpenAI Codex, ChatGPT, Claude, Gemini, GitHub Copilot
